The ig may also be used theregoutically, optionally coupled to toxins, etc. Alternatively the protein to be produced is the sweetener thaumatin. The presence of this signal sequence means that the protein is exported from the cytoplasm and can be recovered from the culture medium or periphasm, in active and correctly folded form. The method allows the class of any antibody to be switched, e.g. most human human ig are of M class, easily reduced and aggregated, and these can now be changed to G, A or E classes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   region

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              7-708-1997.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence was used to produce single chain binding molecules by a peptide. The variable region of the way and lift molecules by a peptide. The variable region of the acquence was producing a clast site and an initiation coden (Atogstrapious to the first coden of the manure sequence and a Hinditz size termination coden (tangett) after coden play. The plasmid constructed to constant this portion was pox3772. A typical polypopide construction is:

[Prof. [COWRI-13]] "1-7-K-A-P-K-N-[RCVR(8-105)]-P-G-B-[LCVR(4-5-109)] and construction is designated TRY40 (see Q05710,R06478).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Apr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disgnosis and therapy of cancer
Disclosure: Fig. 15; 121pp; English.

Abb 55:1 (ECACC 9308;901) recognises the colorectal tumor-associated
antigen CAS5:1. cDNAs for the heavy (094037) and light (094036)
chains of 55:1 were isolated, and f(ab); F(ab); Fab. Fv, scpv or
"min humanized 55:1 constructs have been expressed in myeloma
cells and B. coll.
Sequence (4d Ab);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19 13:23:58

The cDMAs were incorporated into a 7i plasmid vercor, which was incorporated into A. tumefacian. The resultant plasmic expression vertor was used to transform tobacco plants, making them TMV resistant, the plants out a also be biofarmed for the prodm. of anti-virus antibodies.

Example 2: Hig JGC; 10bpp; Edgilsh.

This polypeptide sequence comprises a consensus sequence of murine heavy chain variable regions[(H)] selected on the basis of identity to the WH region (see W27120) of monoclonal anti-diotype antibody 1DDIO. The sequences were obtained from a Genshank database season.

A VL consensus (W27121) was also produced. 1DIO has a titles 118 department (W27121) was also produced. 1DIO has to least 18 department (W27121) was also produced. 1DIO has to least 18 department (W27121) was also produced. 1DIO has to least 18 department (W27121) was also produced. 1DIO has to least 18 department (W27121) was also produced. 1DIO has to least 18 department of the consensus sequences (7 in the 119th Collaboration Collabo Sequence 118 AA;

A monoclonal antibody (Mab) which has donor CDR's of foreign origin
and a recipient framework of human or primate origin, where the
crisinal amino acid as position 29 or 78 of the heavy (N) chain of
the framework is replaced by an amino acid the same as or similar to
that in the corresponding position of the Hohin of the Ab from
which the CDR's are derived, can be used for the treatment of cancer,
and autoimume diseases, specifically multiple myeloms. Imphoma and
temmicold arthritis. The Mab binds to CDNs. Replacing framework
residues 39 and 80 of the humanised Ab with the original donor
residues are cores the antigen binding activity of the antibodies.
Sequence 11 Ai.

03-JAN-1997 (first entry)
Humanised anti-CD39 monoclonal antibody variable heavy chain.
Honoclonal antibody; Abb humanised: cancer: autoimmune disease:
multiple mysloms: lymphoms: rheumatoid arthritis; CD39;
homphementary determining region; CD8: heavy chain; light chain.

pri DNA embodiasa.

The present sequence are moving, adding polypeptide sequences - used for predictions moving, adding or neutralising heavy metals, such as predictions moving, adding or neutralising heavy metals, such as predictions are produced. The present sequence represents the heavy children variable region for the present sequence represents the heavy children calling the present can be used for mental, which immunoreacts which a lead cations. The protein can be used for indirect manufactures by the alead cations. The protein can be used for indirect manufactures and the sequence was derived from the production of the protein and production of the protein and production of the protein and production of the protein of the production Query Match Best Local S Matches 1 DESULY SO

J. Exp. Med. (1992) 176.761.779
Both 15M and 19G anti-DNA antibodise are the produces of clonally selective B cell stimulation in (NEB x NEW)F1
mice.
